Dear Stephanie Schmidt,

Looking for a software engineer who knows Ruby on Rails Developer?

I am a math-enthusiast with analytical and logical skills who finds satisfaction in being able to create web applications, which is why I believe I will be successful as a Software Engineer at Activate. Your aim for customer satisfaction and success is the value that I most resonate with as I have built web applications from the figment of my imagination, with focus on user comfort.

Being a former QA engineer, I know how to break code. This experience has made me curious about designing a robust code myself. Even today, I always make sure to test every line of code. I started my coding journey by taking several online courses, and advanced my education by attending App Academy (a/A), a **rigorous, 1000+ hour web development program** where I **furthered my expertise in developing full stack web applications using React, Redux, Javascript, PostgreSQL, MongoDB, HTML, and CSS, among others.** I designed [SmartSplit](#), a clone of splitwise, inspired by my love for math where I exercised all the technical skills that I learnt so far.

My time at a/A was highly stressful, my daughter was 18 months young; I wanted to quit so many times but I pushed through and here I am today building web applications in various technologies. I don't stop until I achieve my goal.

**I am sure my determination, tenacity and positive attitude will be a great addition to any team.** I'm confident I'll be able to hit the ground running as a Software Engineer at Activate. I'd love to contribute as a member of a team that values varying perspectives and inclusivity, and as such, I look forward to speaking to you about any potential next steps.

Thank you for your consideration

Best regards,  
Rachana Vishwanath
